Storage solution for Banking

Mobile Shelving System

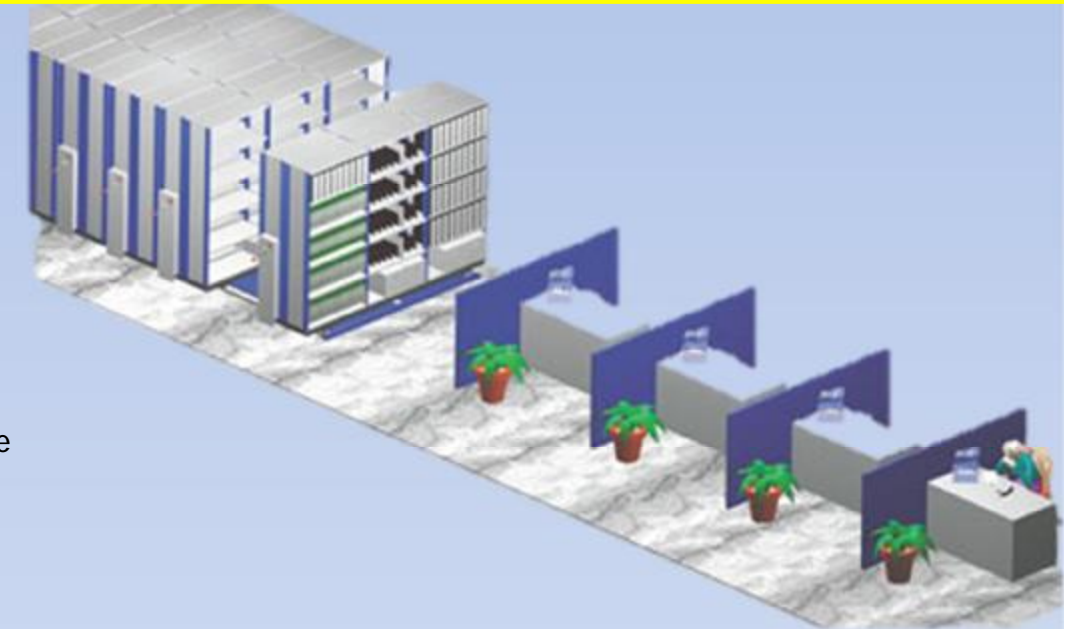

Mobile Shelving is an innovative space saving storage system with storage units mounted on mobile trolleys, thereby eliminating un-productive aisles. It has a simple and elegant construction with minimal maintenance. The main advantage of the system is that it saves and/or makes best use of the space as more storage units can be accommodated on the same floor area. Mobile Shelving virtually doubles your storage capacity. Ideal for high density document & industrial storage applications, excellent flexibility, functionality and aesthetics are added features of this space saving system. This system is ideal for storing files, stationary, bulk documents, manuals, tapes, computer disks, perishable goods, laboratory equipment, packaging material and other high value items with restricted access. The effort required for the movement of the storage unit is about 0.05% of the dead load.

Mobile Shelving System

Benefits:

- Better use of Space: Only one aisle is needed between run of shelving which can increase utilization close to 100%. Ideal for storing bulk documents, archival storage, maintenance stores, Quality Assurance departments, etc.
- Security: The design of the system can prevent access by unauthorized people. It also limits the spread of dust etc.
- Effortless Movement: Anti-friction bearings and efficient drive mechanism ensures easy and smooth movement.
- Easy Adaptation: The wide range of sizes available allows the system to maximize available cubic space. Its light tone finish blends with any environment.
- Aesthetics: Scratch resistant, uniform and lasting finish that remains attractive for years. Wide variety of colour combinations is available.
- Easy Assembly: Its modular construction makes assembly and handling easy. Hardly needs any maintenance.

Electronic File Cabinet

ELECTRONIC FILE CABINET

- ELECTRONIC FILE CABINET have rotating trays that bring stored items automatically to the operator. These can reduce your floor space requirements by 80% or more compared to conventional shelving storage methods
- In addition to helping you manage your inventory costs, the automatic retrieval system locks to provide total security for stored parts.
- Improve efficiency by allowing workers to fill orders without wondering through aisles searching for parts. Stored parts are brought to an ergonomic work counter with the push of a button, increasing workers' parts pick rates. Enhancing worker productivity can reduce personnel costs and create a more efficient business.

Boltfree & Slotted Angle Shelving System

If you would like to create the highest possible number of storage locations in a limited space, platform-supported racking systems, also known as multi tier shelving offers the most cost-effective solution

We can offer either multi-tier shelving solutions where the walkways are supported directly from the shelving system, or shelving with an over-sailing mezzanine platform.

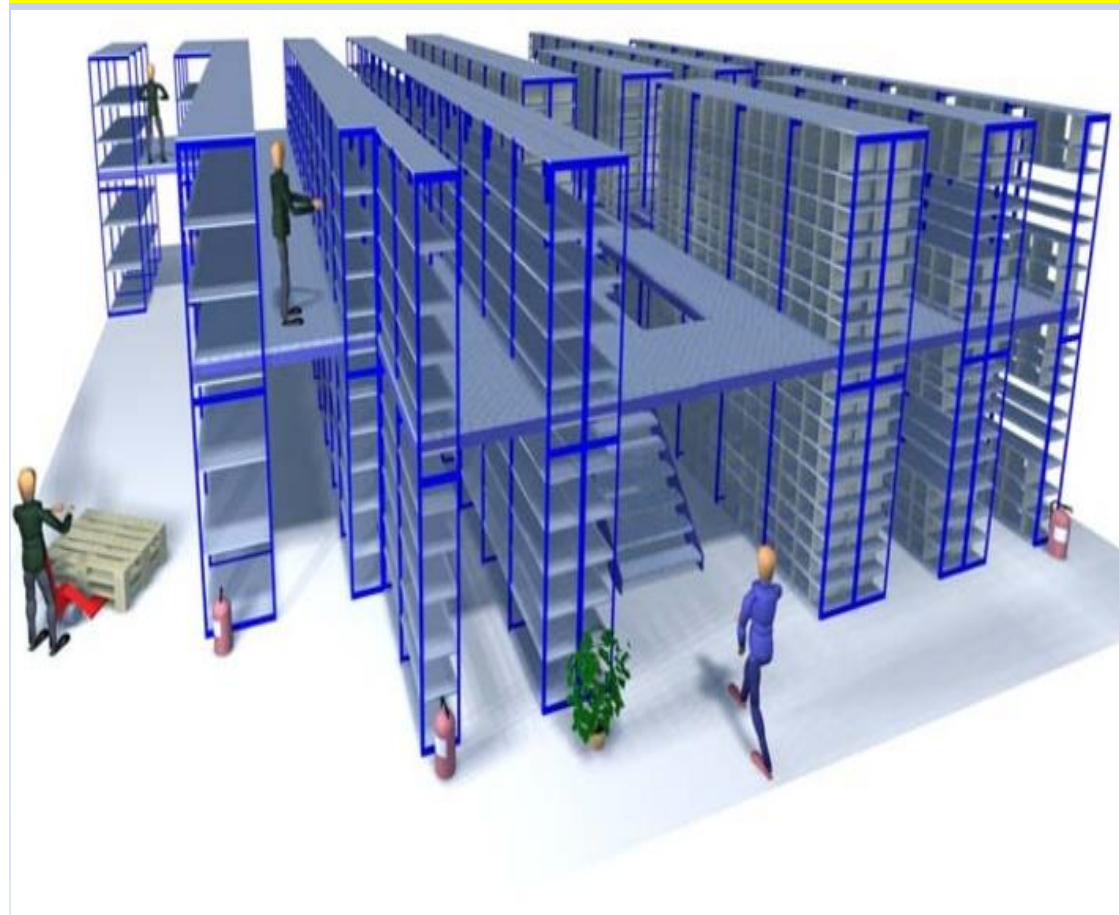

When using multi tier systems, SSI SCHAEFER can incorporate conveying systems for the inbound movement of stock for replenishment and out bound totes of picked orders, transferring to the despatch area.

Benefits:

- Planning, consulting, design and assembly all from one source
- Wide range of racking systems for implementation
- Simple scalability of the design
- As required: Integration of SSI SCHAEFER conveyor systems
- Comprehensive selection of system components and accessories

Multi Tier Slotted Angle Racks

Locker columns & Wardrobes

All SSI SCHAEFER locker columns and wardrobes can be quickly installed without structural alterations and extended as required at any time. Their extraordinary versatility offers both individuality and enormous space saving effects. For instance, up to 20 lockers take up little more than 1 metre of room length

Boxes and Containers
