

Ø Cantilever Racking System

All cantilever uprights can be used as single-sided or double-sided designs and the rows of uprights can be any length required. The cantilever arms can be modified flexibly for stored goods with different heights and loading requirements. Subsequent adjustments and adaptations can be made without tools.

In case you would like to store special materials or need to meet specific ambient conditions, our expert consultants will be happy to design customised concepts for you.

BENEFITS

- Suitable to store long items
Handling through special MHEs or Forklifts with special attachment
- Easier to use With no front column in the way, faster to load and unload, lowering handling time and costs.
- More flexible Loads may be placed anywhere along the entire length of a row on a cantilever rack.
- More compact The lack of a front column saves horizontal space and provides more abundant handling clearance.
- More selective Any load or storage slot is immediately accessible.
 - More economical Both reduced handling time and increased space utilization make cantilever racks more cost-efficient. And increase load length increases.
